Netflix Content Analysis: Summary Report

This report goes with the dashboard I built for Tasks 1, 4, 5 and 6. I worked with the Netflix titles dataset (8,807 titles). The data has no viewing or revenue numbers, so when I say something is “top” or “leading”, I mean it has the most titles in the catalog.

Task 1: Portfolio overview
The catalog has 8,807 titles. 6,131 of them are movies (69.6%) and 2,676 are TV shows (30.4%). The United States has the most titles (3,690) and India comes second. The most common genre is International Movies with 2,752 titles. A title can have more than one country or genre, so these counts overlap.

Task 4: Growth and trends
Releases grew slowly until about 2014, then rose fast from 2015 and peaked in 2018. After that they went down every year. Titles added to Netflix peaked one year later, in 2019, so there is a gap of about a year between release and addition. In 2020, TV shows grew by 9.8% while movies dropped by 18.3%. The charts only show 2010 to 2021, because earlier years have very few titles.

Task 5: Category analysis
I used audience rating as the main category. TV-MA is the most common rating with 3,207 titles (36.4%), and TV-14 is second. The average movie runs 99.6 minutes and the average TV show has 1.8 seasons. The country table shows that the top genre changes by market, for example Dramas in the United States and International TV Shows in South Korea.

Task 6: Executive summary
Opportunities: TV shows are only 30.4% of the catalog but grew in 2020, and international content is the top genre. India is the second biggest market.
Challenges: movie releases fell in 2020 and releases have been going down since 2018. Additions also fell after 2019. Mature ratings (TV-MA and TV-14) dominate the catalog.

My recommendations:

1. Content planning: increase the share of TV shows above 30% and prioritize International Movies.
2. Market growth: add more local content for India and match the top genres to each major country.

Notes
“Category” here means audience rating. Country counts include co-productions, so a title is counted once for each country it lists. The latest date in the data is December 2021.
